

OUR COMPANY IS A COLLECTIVE OF AMAZING PEOPLE STRIVING TO BUILD SUSTAINABILITY AND QUALITY

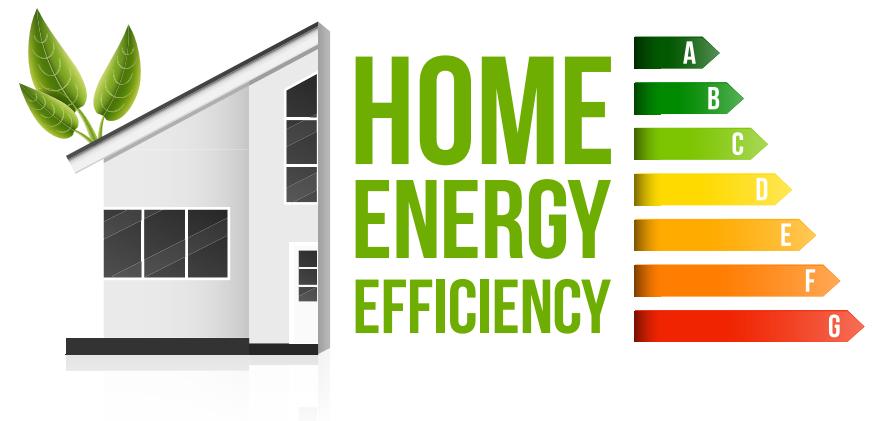

We design Certified Green Built, Energy Star, High-Performance structures.
We focus on air quality, climate comfort and low energy consumption.

Our customers receive a healthy environment.
A healthier home, means a healthier you.

THE BENEFITS

You will see, feel, and hear the difference of the fully integrated approach to design and construction combined with tried-and-true best building practices that are applied to every ENERGY STAR certified new home.

WHAT WE PROVIDE

We provide a one-stop-shop for designing and building your new environment. Our staff is available to make this process simple for our clients. Our goal is to raise your health quality just by walking through your front door. ONSBC wants the best for you and your family.

HOW IS THIS DONE?

Air Quality:

What could be more important than fresh air?

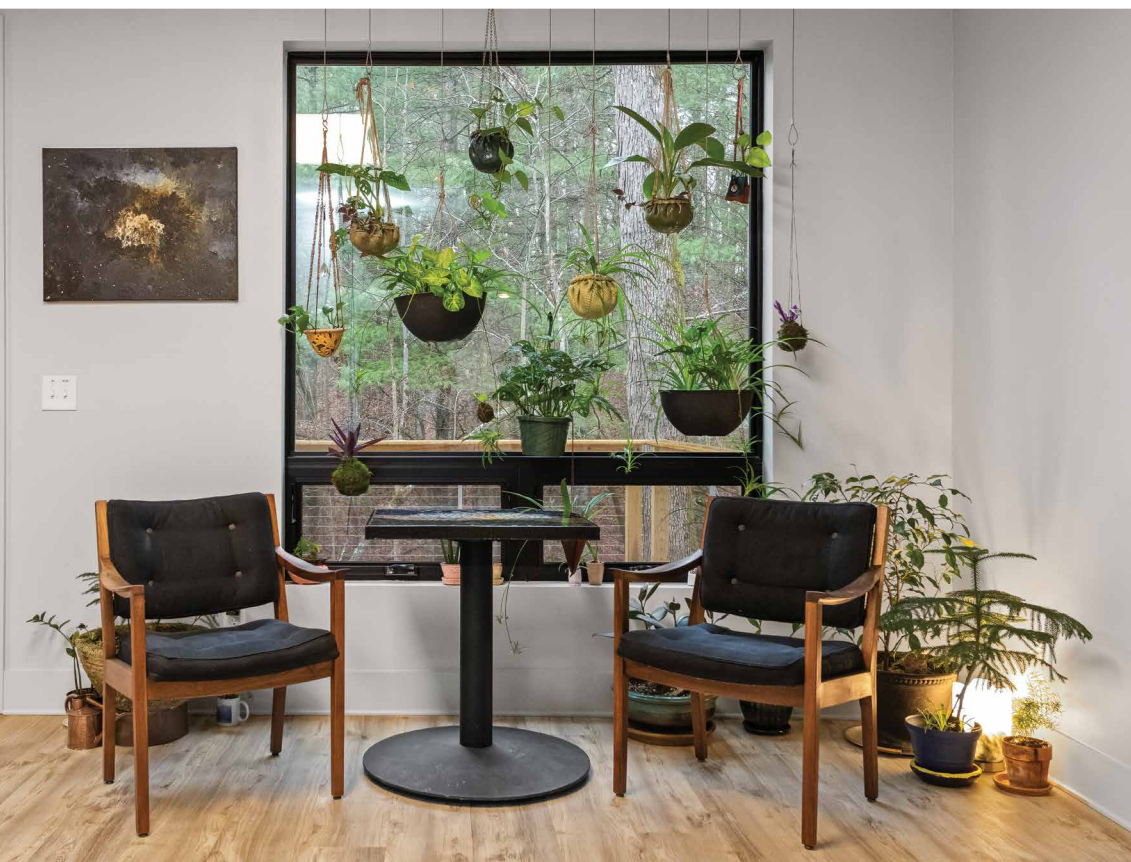

Our homes feature fresh air intake and exhaust, whole-house dehumidification, and passive radon mitigation.

We use Certified Green Materials to eliminate materials that emit harmful vapors into your home. You and your family will have a safe, healthy space to grow and prosper.

Energy Savings:

We are partners in the Energy Star program.

It is a program to conserve power consumption and lower our carbon footprint.

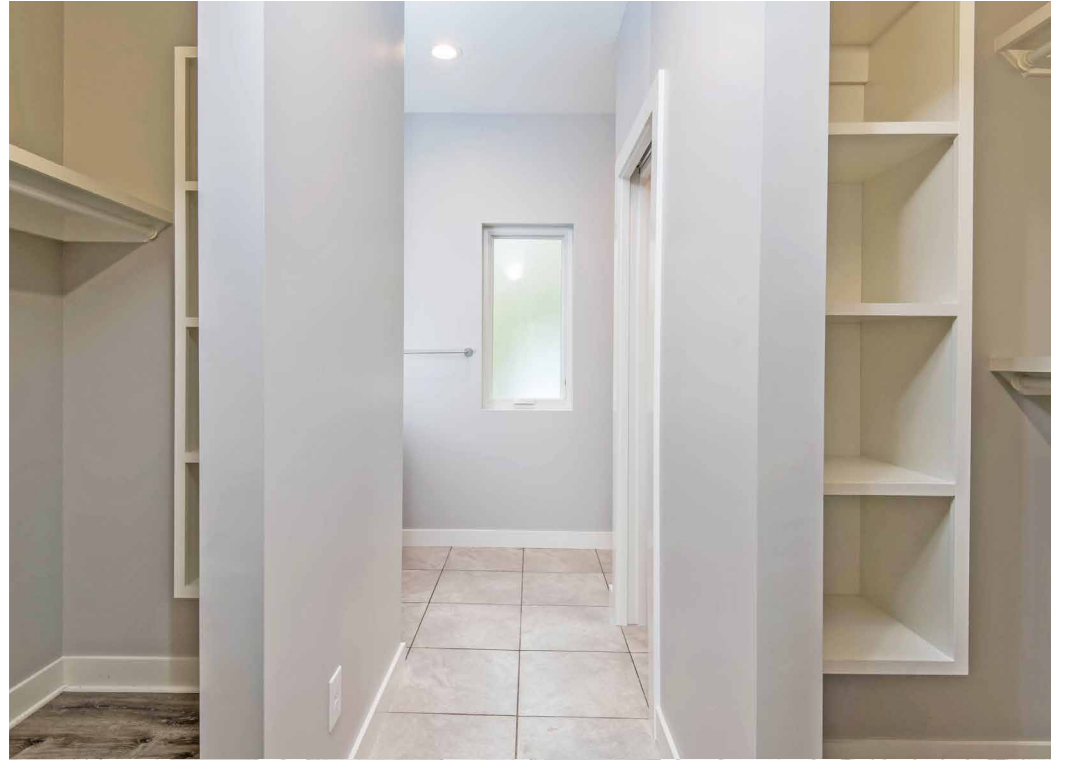

Our homes are less expensive to operate and maintain. A home that earns you money; while providing sustainable solutions for future generations.

Water Consumption:

We are partners with WaterSense. It is a program developed to conserve our greatest resource; our water. Any water fixture used in our construction has been approved by WaterSense and verified by a third-party assessor.
